AURA-Dx — AI-Assisted Respiratory Screening Report

Healthy · Low confidence · 60.0% model confidence

Patient	Syree Dizon	**Age**	21 years
Date of Birth	2005-05-10	**Gender**	Female
Clinician	Doc David	**Date**	2026-10-20 11:21:15
Model	2.5.0-multi	**Audio**	81.9s
Takes recorded	5	**Fusion method**	Mean of takes, with single-take safety override
Safety override	Not applied	**Status**	COMPLETED

Probabilities	COPD 21.2%	Healthy 60.0%	Pneumonia 18.8%

CLINICAL RECOMMENDATION: No urgent action required. Routine follow-up as clinically indicated.

Per-take scores

Take	Length	Stage 1 healthy	Stage 2 pneumonia	Result
1	18.6s	0.86	—	Healthy
2	18.2s	0.55	0.47	Pneumonia
3	20.2s	0.95	—	Healthy
4	11.9s	0.56	0.47	Pneumonia
5	12.5s	0.76	—	Healthy

Scope: Screening support only. This system evaluates COPD and pneumonia and cannot assess other causes of abnormal breathing sounds. A result is not a diagnosis.

This is an AI-assisted screening tool and does not replace clinical judgment. All results should be interpreted by a qualified healthcare professional.
