DATA PRIVACY NOTICE & EVALUATOR CONSENT

Thesis Title: Web-based AI Screening System for Respiratory Disease Risk Assessment via Breathing Sound Analysis

In compliance with the **Data Privacy Act of 2012 (R.A. 10173)**, your name and evaluation responses collected in this form will be used solely for the evaluation, verification, and research analysis of **AURA-Dx**. All personal details will be kept strictly confidential and accessed only by authorized project researchers.

☐ By providing your information and completing this form, you consent to the collection and processing of your evaluation data for this study.

WEB-BASED AI SCREENING SYSTEM FOR RESPIRATORY DISEASE RISK ASSESSMENT VIA BREATHING SOUND ANALYSIS

Respondents: Please check (✓) the space provided.

☐ Physician ☐ IT /Engineering ☐ Data Privacy Act

Name (*Pangalan*): _____

Clinic Address (If applicable): _____

PART I: ACCEPTABILITY OF THE WEBSITE

DIRECTION: Please put a check mark (✓) in the number corresponds to the level of Acceptability of the website in terms of functional suitability, performance efficiency, usability, reliability, maintainability, and security. Use the five-point Likert scale shown as guide.

Scale	Level of Acceptability
5	Strongly Agree (*Lubos na sumasangayon*)
4	Agree *(Mas sumasangayon)*
3	Neutral (*Walang Sariling Panig / Di-Tiyak*)
2	Disagree *(Hindi sumasangayon)*
1	Strongly Disagree *(Lubos na hindi sumasangayon)*

1. FUNCTIONAL SUITABILITY		**5**	**4**	**3**	**2**	**1**
The developed website…						
1.1	performs all intended task, from audio recording/uploading to displaying result summaries.					
1.2	gives a complete and detailed report for user evaluation.					
1.3	provides necessary navigation/buttons that helps to finish task smoothly.					
1.4	gives the correct output.					
2. PERFORMANCE EFFICIENCY		**5**	**4**	**3**	**2**	**1**
The developed website…						
2.1	processes audio files and generates diagnostic outputs within an acceptable timeframe.					
2.2	responds promptly when navigating between pages and submitting audio inputs.					
2.3	maintains smooth operation even when handling long audio recording.					
2.4	real-time data updates (e.g., refreshing lists, updating information) displayed with minimal delay.					
3. COMPATIBILITY		**5**	**4**	**3**	**2**	**1**
The developed website …						
3.1	operates without functional errors across various web browsers (e.g., Google Chrome, Mozilla Firefox, Safari, and Microsoft Edge).					
3.2	seamlessly integrates and captures audio input directly from the provided electronic stethoscope hardware.					
3.3	successfully uploads and processes the standard audio recordings that is recorded from the electronic stethoscope without system conflicts.					
3.4	functions smoothly alongside other running applications or background tasks without causing system performance issues.					
4. RELIABILITY		**5**	**4**	**3**	**2**	**1**
The developed website…						
4.1	consistently operates without crashing or generating unexpected system errors.					
4.2	effectively handles invalid inputs (e.g., background noise, non-breathing audio) by prompting the user to try again.					
4.3	safely handles invalid audio inputs without system crashes or unexpected shutdowns.					
4.4	exports data files (e.g., PDF) match the exact information displayed on screen.					
5. MAINTAINABILITY		**5**	**4**	**3**	**2**	**1**
The developed website…						
5.1	features a flexible software layout and architecture that can easily accommodate future updates or improvements.					

5.2	provides clear system components and detailed error messages that make it easy for administrators to diagnose and fix technical issues.					
5.3	can be easily integrated with other external systems or platforms to build a larger application.					
5.4	categorizes, filters, and organizes historical diagnostic records and past breathing sound screening results by date without data corruption.					
6. FLEXIBILITY		**5**	**4**	**3**	**2**	**1**
The developed website…						
6.1	renders its layout, screen resolution, and interface across different devices (e.g., Computer, Laptop, Smartphone, and Tablet.)					
6.2	maintains a clear, structured, and readable layout across different display orientations (e.g., portrait and landscape modes).					
6.3	allows users to navigate back and forth between screening steps without losing entered patient data.					
6.4	operates reliably across different network environments (e.g., local clinic network, Wi-Fi, or mobile data).					

PART II. COMMENTS/SUGGESTION:

_____

_____
